Early Bird Peas

GARDEN PEAS

CULTURE—There are two classes of Peas, the smooth-seeded kinds, which are very hardy and may be planted as early in the spring as the ground can be prepared, and the wrinkled Peas, which are less hardy but much better in quality. By planting 1 or 2 varieties of smooth-seeded Peas as early as possible and then a selection of wrinkled sorts that will mature in succession, a constant supply of tender green Peas may be had. Two pounds will sow 100 feet of row, 2 bushels to the acre in 3-ft. rows.

PLANET JR. HAND WHEEL HOES AND GARDEN PLOWS

No. 12 PLANET JR. DOUBLE AND SINGLE-WHEEL HOE COMBINED

Packed weight, 33 pounds.
Equipment:

- 1 pair of 6-inch hoes.
- 4 steel cultivator teeth.
- 1 pair of plows.
- 2 leaf lifters.
- All oil-tempered.

The No. 12 is the most popular Double-Wheel Hoe. It can be used by man, woman or boy. It is identical with No. 11, except that the 4½-inch hoes and the rakes are omitted from the equipment, and it is sold at a correspondingly less price. The attachments with it are what gardeners use most, and the short hoes, rakes and any of the attachments can be added at any time. You'll be astonished how easy it is to save time, labor, money and get bigger crops if you use it. **Price \$12.95.**

No. 11—The same as above except that it has one pair 4½-inch hoes, two 3-tooth rakes and two 5-tooth rakes, in addition. **Price \$16.50.**

No. 13—Is constructed the same as the No. 12 (shown above) but has for the equipment one pair 6-inch hoes only. **Price \$9.95.**

No. 19 PLANET JR. GARDEN PLOW AND CULTIVATOR

Weight, 21 pounds.
Equipment:
1 2-inch cultivating tooth.
1 10-inch sweep.
1 plow.
1 5-prong cultivating attachment.

No. 19—This attractive implement is especially designed for the farmer's garden work, though it offers to every one with either field or garden a cheap and effective tool for wheel-hoe operations. The standard is slotted for depth regulation, and an adjustable piece carries any of the attachments that go with the machine. The cultivating tooth does deep work and marks out rows for onion sets, plants, etc. The sweep is fine for level shallow work. The five-prong cultivator attachment is bolted directly to the frame, first removing the S-37 standard. Use the five-prong attachment for deep and shallow cultivation. **Price \$5.75.**

No. 17 PLANET JR. SINGLE-WHEEL HOE

Packed weight 22 pounds.
Equipment:
1 pair of 6-inch hoes.
3 steel cultivator teeth.
1 large garden plow.
All oil-tempered.

No. 17 is identical with No. 16, except in equipment, and all that has been said previously regarding Planet Jr. Wheel Hoes is equally true of No. 17. The three sets of attachments which go with it are all the finest of their kind, and make an outfit sufficient for most garden work. You can do more and better work with it in one day than you can do in several days with the old-fashioned hand hoe. The hoes exchange sides to work to or from the row, and change of wheel regulates the depth. The hoes are constantly useful throughout the season. The cultivating teeth are oil-tempered and work admirably, are changeable for pitch and are useful for marking out rows. **Price \$8.95.**

No. 16—The same as above except in equipment, which includes one pair 6-inch hoes. Three cultivator teeth. One large garden plow. One 7-inch rake. One 4-inch rake. One leaf guard. **Price \$10.25.**

No. 17½—Same as No. 17—but without the plow. **Price \$7.95.**

JOHN DEERE-SYRACUSE No. 210 SULKY PLOW

A Light-Draft All-Wheel-Carried
Plow For Every Type of Soil

*Richardson's

PRICES

No. 1441—Right, Chilled. Weight 384 lbs.....	\$67.75
No. 1442—Right, Chilled. Weight 376 lbs.....	66.75

This is acknowledged to be the lightest-draft plow of its type. It does an extra good job of plowing in any kind of soil and under all conditions. It runs level and plows at uniform depth, always even when turning square corners. It's the all-wheel-carried plow that has established its superiority wherever the use of this type of plow is practical. The advantages over the ordinary sulky plow are many. The special design of rolling landside, and the fact that the plow can be used with either the Syracuse or John Deere clean-shedding bottoms are features responsible for the extremely light-draft and good working qualities. The rear weight of the plow is supported by the rolling landside, which serves as the third leg of a triangular rolling support. All of the body and frame weight is properly balanced and rolls on three bearings that run in oil. Thus, friction between the plow and the bottom of the furrow is eliminated, and the side pressure against the furrow wall is minimized. Shares stay sharp longer than on any other riding plows, because the rolling landside prevents the plow from running on its nose. Neither is there any dragging friction, which is equally destructive to share life and light draft. The outstanding feature that is found only on this plow, is the front furrow caster wheel that actually governs the plow; the controlling device that automatically keeps the plow cutting furrows at uniform width and depth at all times.

Long, conveniently-reached levers make it easy to control depth and leveling accurately.

The power-lift is simple, and positive. It will stand the hardest, roughest work. It will last far longer than any ordinary power lift.

The land wheel, from which the power-lift operates, is solid and straight from tire to box on the inside; it does not pick up dirt or trash, thus it is a natural protection to clutch and driving parts. On a half turn of this wheel, the bottoms lift high and level—no digging into the ground or clogging with trash when turning the ends of the field.

When the bottoms are lowered, they enter the ground point first and penetrate quickly to plowing depth.

JOHN DEERE MODEL B DISK HARROW

Independent action of the gangs is largely responsible for the flexibility of the Model B. This construction is of great value because it allows one part of the harrow to pass over an obstruction in the field without interfering with the rest of the machine. A rigid harrow, under the same conditions, is likely to leave some of the land uncultivated.

To angle gangs, just pull a single trip rope.

SYRACUSE LEVER SPRING TOOTH HARROW

The frame bars of angle steel, thoroughly protected by steel shoes, which double the life of the harrow. Inside frame bars raised at the end, giving free outlet to trash. Frame with small opening in front, absolutely preventing loading at this point, which is so common with other makes. The tooth bars are of channel steel journaled in the malleable brackets above the frame which gives the teeth high support and great range or adjustment for depth of cultivation and clearance. Spring teeth of high carbon steel, without bolt holes, and held by malleable holders, allowing for separate adjustment when worn. By use of the levers the teeth can be readily set deep or shallow, or can be thrown out of the ground to clear off trash and for dragging harrow from one place to another. Central and direct draft without side motion; adjustable hitch, so that the teeth at the front and rear can be regulated to work at the same depth. No spring-tooth harrow made is giving such universal satisfaction.

JOHN DEERE SELF-DUMP STEEL HAY RAKES

In light or heavy hay, while raking into windrows or bunching—in all conditions—the John Deere Self-Dump Sulky Rake does a clean job of raking and dumps easily. Even in exceedingly rough ground, it is giving remarkable satisfaction to users the country over. Its better performance makes a place for it on every farm.

One trip across the field on the John Deere will convince you that there's a big difference in sulky rakes. It will also make you realize, beyond all doubt, that the John Deere has the features for which you have long been looking—clean raking and ease of operation in varying conditions, and a sturdiness that means long life.

JOHN DEERE SIDE-DELIVERY RAKE WITH FLOATING CYLINDER

The smooth, flexible motion of the floating cylinder causes the hay to be "floated" into loose, fluffy windrows. The hay is handled more gently than it possibly could be with a rigidly-mounted cylinder, the windrows are more open and airy to permit the rapid evaporation of moisture by the free circulation of air, more of the leaves are saved, and the color is preserved, resulting in a higher quality of hay.

A Simple, Labor-Saving Method

Making hay with the aid of the John Deere Side-Delivery Rake requires but little more effort than driving a team or a tractor.

One man with this rake does all the work which, in the days of hand rakes and pitchforks, required the efforts of a small army of men and women, boys and girls.

JOHN DEERE RAKER BAR AND CYLINDER HAY LOADER

Full-Floating Gathering Cylinder

This is the only loader that has the full-floating gathering cylinder used in combination with the raker-bar elevation. The floating cylinder is not a new idea on a John Deere loader. This feature was first introduced 45 years ago on the John Deere Double-Cylinder Loader and, since then, has been largely responsible for the success of John Deere Loaders. It is especially valuable when the loader is used with tractor. Because the flexibly-mounted cylinder floats, it automatically adjusts itself to the uneven ground surfaces and gets all the clean hay regardless of how rough the field may be. Once the cylinder is adjusted for the volume of hay to be gathered, it isn't necessary to make further adjustments in the field to take care of variations in the ground surface—the self-adjusting spring-mounted cylinder takes care of that. No time is wasted by the tractor operator in getting off and on the tractor to make adjustments in the field, as he would if the cylinder were rigidly mounted. The result is better work and cleaner raking without the teeth digging in.

The special springs which control the opening at the lower end of the compressors give the proper pressure to both large and small quantities of hay as it is delivered to the carrier.

MYERS NEW WAY TANDEM ADJUSTABLE DOOR HANGERS

The New Way tubular track is mounted with brackets. We call special attention to the two flanges shown on the underside of the track, which are a part of the track itself, turned down forming a girder or truss, which stiffens the track, and adds greatly to its strength and carrying capacity.

The trolley rollers are of solid steel roller bearings.

The hanger has two adjustments vertical and lateral, so that with any ordinary wrench the door can be adjusted to the building.

MYERS ADJUSTABLE COMPRESSION GRAPPLE FORK

Made of High Carbon, Heat Treated and Oil Tempered Heavy Spring Steel. Closes and locks itself before returning to the load. Has 26-inch tines. IRON AGE (Improved Robbins) POTATO PLANTER

JOHN DEERE CORN BINDER

Famous For Its Better Work Under Difficult Field and Crop Conditions

Positive Delivery of Stalks to Binding Attachment

Lodged and tangled corn is readily picked up by the gatherers. The gatherers are wide at the points and can be accurately set at any desired distance from the ground.

As the corn enters the gatherers, four chains carry the corn to the binding attachment. In addition, two top gather chains with long lugs help to keep the tops straight and assist in forming well-shaped bundles. The two steel throat springs, adjusting themselves to any volume of corn, hold the corn into the chains.

The butt chain is equipped with long, wide folding lugs that extend across the throat of the machine and prevent the butt end of the stalks from lagging.

JOHN DEERE ONE HORSE MOWER

The John Deere High-Lift One-Horse Mower is the same as the two-horse machine, except for its lighter construction, which fits it for one-horse work.

It has the high, easy lift, the balanced drive gears, the quickly and easily made field adjustments, flexibility of the cutter bar; in fact, all of the features that have made the John Deere two-horse machine a favorite on thousands of farms.

The quickness and ease with which the cutter bar can be raised to get great clearance has made the John Deere a most satisfactory mower for use on rough, stony land.

It is furnished regularly with shafts, and can be equipped with either a 3½- or 4-foot cutter bar.

For the user who wants a good-working, light-draft, easily-operated one-horse mower, the John Deere High-Lift will give real satisfaction.

Sizes. 3½-ft., \$90.00; 4-ft., \$91.25.

MOWER KNIFE GRINDER

There is nothing harder on the mower or on the team than dull knives. The Knife Grinder can be clamped to the rim of the wheel, where it is easy to use. The knife sections can all be ground with a perfectly clean beveled edge, all of them exactly alike. This grinder is equipped with a fine-tempered steel regulator, which adjusts the pressure so that all of the sections can be ground evenly and regularly. The handle runs parallel to the knife, which is always in plain sight while being ground. Thus there is no danger of cutting the operator's hands. The grinder can also be fastened to a bench. A special stone for grinding tools or gumming saws will be furnished on special order.

No. 802 JOHN DEERE ALL-STEEL FARM GEAR

Low down Construction is one of the important advantages of this All-Steel Gear. The rated capacity is 4,000 lbs. but the maximum capacity is much greater. It is available in the standard 56" track or 60" wide track. By merely moving a bolt, you can telescope the reach to any length between 6 ft. 10 inches and 10 ft. 10 inches between bolsters. The tubular reach is exceptionally strong and adequately braced—front and rear axles are kept in perfect alignment at all times. Will not buckle when backing with a heavy load. The wheels run on removable steel sleeves. When worn, these sleeves can easily be replaced at small cost by the owner without

special tools. This feature is highly important. By simply replacing the old sleeves with new ones, the wheel bearing can be kept just as good as new. A round tubular-steel pole is furnished as regular equipment, bolsters are strongly built of one-piece high-carbon steel. Write for special pamphlet which describes the above more fully.

JOHN DEERE MODEL "LA" TRACTOR

This tractor is built primarily to meet the requirements of the small general farmer, the vegetable grower, and the flower grower. It provides them with a light, economical power unit. In addition to the above, the tractor will be used in the care of public parks, golf courses, estates, and the mowing of grass and weeds on the public highways. It will do the plowing, seed bed preparing, planting and cultivating on small-sized general farms. It will do all farm work that is ordinarily done with a team of horses and will eliminate such operations as hand planting and hand cultivating on specialized farms.

An outstanding feature of the John Deere Model "LA" Tractor is its stability and power for its size and weight. Exhaustive field tests on Farms in all sections have proved the efficiency of the Model "LA" in handling all of the jobs of seed bed preparation as well as planting and cultivating.

Capacity

This tractor will pull loads equal to those pulled by a two-horse team. For instance, it will pull a plow with a 12" bottom, 7" deep, in average plowing conditions in second gear (3 1/4 Miles per hour) and will handle all other jobs requiring a similar amount of power. It is built to surface cultivate a strip 80" wide, handling, for instance, four 20" rows or similar row combinations requiring an

80" cultivation. It will pull a three-unit lawn mower with a total cutting width of 84". It can be used in place of a team for pulling a manure spreader.

It is to be remembered that while pulling loads ordinarily pulled with a team, the tractor will turn out much more work in a day than a team of horses because of the constant speed at which it works.

LAWN SEED

RICHGREEN LAWN GRASS SEED

Yearly comparative trials have proved this strain to be unsurpassed for first-class, permanent lawns. Only the finest varieties of suitable grasses are used and the seed is recleaned until it is free from chaff and weed seeds.

This seed will produce a green, smooth, deep-rooted, velvety sod with a thick bottom, free from the common grasses which produce clumps and knots on the lawn. It is used extensively on the finest estates to produce those exquisitely smooth, rich green sweeps of lawn which are so much admired. **Lb. 45c; 3 lbs. \$1.25; 5 lbs. \$2.00; 20 lbs. \$6.50; 100 lbs. \$30.00.** Delivered free in United States by parcel post, freight, or express, our option.

SUPERFINE LAWN SEED

This is a correct combination of triple refined imported and domestic grasses, including a liberal proportion of Bent Grass, producing a rich green turf. **Superfine** is undoubtedly the finest Lawn Seed available in this country or abroad. One pound will sow an area of 200 square feet. **Lb. 55c; 5 lbs. \$2.40; 20 lbs. \$8.50; 100 lbs. \$40.00.**

SHADY PLACE LAWN GRASS MIXTURE

Will quickly produce an abundant and even growth of beautiful green grass in shade, and as it blends well with our Richgreen Lawn Grass Seed it may be used on those portions of the lawn which are shaded by trees, buildings, etc., thus covering the whole area with a rich green sward. **Lb. 60c; 3 lbs. \$1.75; 5 lbs. \$2.50; 10 lbs. \$4.80; 20 lbs. \$9.25; 100 lbs. \$45.00.** Delivered free in United States.

LAWN GRASSES should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.

SANDY SOIL LAWN GRASS

A carefully blended mixture of fine-bladed grasses that will produce a permanent and beautiful lawn on the lightest and most sandy soils. Seed one pound to 200 sq. ft. **Lb. 60c; 3 lbs. \$1.75; 5 lbs. \$2.50; 100 lbs. \$45.00.** Delivered free in United States.

PERMANENT TERRACE AND SLOPE MIXTURE

This mixture has been carefully blended so as to contain various grasses of rapid, dense, even growth and strong root systems, which will insure a permanent, beautiful slope. **Lb. 65c; 3 lbs. \$1.80; 5 lbs. \$2.50; 100 lbs. \$42.00.** Delivered free in United States.

VELVET GREEN LAWN GRASS
